WHAT IS HUSH IN REAL LIFE?

We test our pods and booths with cutting edge technologies in professional environments. And we're committed to bringing the best possible solutions to the market!

Open office noise is the volume of blaring TV (~70 dB). Hushoffice pods take this noise and convert into 36dB: a decibel level as peaceful as the sound of singing birds.

Inside Hush, every conversation is converted to the volume of a whisper, and can barely be heard from outside.
