

# Engineering Practice

Property and construction consultancy with 30 years' experience in Development Appraisal, Construction Cost Management, Project Management and Asset Management.

## BACKGROUND

Several layout options were discussed and provided in both 2D and 3D so the customer could get a real feel for the size and positioning of each piece of office furniture.

## ABOUT THE PROJECT

In this endeavor, our focus was on providing not just aesthetically pleasing but also ergonomically sound solutions tailored to our client's needs.

Understanding the paramount importance of employee well-being and productivity, our client emphasized the necessity for ergonomic office furniture throughout their workspace.

We carefully selected one of our most sought-after office chairs, the "Liberty," renowned for its ergonomic design and unparalleled comfort. Complementing the Liberty chair, we integrated height-adjustable desks into the workspace, providing employees the flexibility to alternate between sitting and standing positions throughout the day. We also installed monitor arms onto the desks, allowing for effortless adjustment of screen height and angle.

## RESULTS

The end result is a space being used to its maximum potential with an open plan bright and timeless feel. Through the careful selection of ergonomic furniture solutions like the Liberty chair, height-adjustable desks, and monitor arms, we have crafted a space where comfort, health, and productivity converge harmoniously.
